

## Driven to Distraction

23 eye-catching vehicles tested for accessibility

**ROAD TO SUCCESS**  
Find out what's on at the UK's biggest outdoor mobility show

### MOTOR

#### Cowal Mo

It's not often that a company has the huge range of varied products that they have. At Cowal Mobility, they have a team of skilled designers and engineers who produce products tailored to the needs of their customers. Although Cowal Mobility is primarily unable to exhibit this year, you can still try out examples of their work by taking to the test track and driving the Honda Jazz or the Honda Civic. A family run business, they have been designing, manufacturing and installing high quality driving aids and conversions for over 32 years. Cowal Mobility offers a friendly, first class service to their customers who often come back to the company for years to come. Contact: Cowal Mobility www.cowalmobility.co.uk 01494 731400

#### PB Conversions

Stand: C3  
PB Conversions' philosophy is simple: provide customers with what they want at a reasonable price as quickly as possible. The company manufactures their own products, including hand controls, which they say were only such design to pass the Mobility Code of Practice first time. All of PB Conversions own adaptations come with a three-year warranty, and an annual letter is sent to customers reminding them to have them serviced - the first service being free!

As well as hand controls, the company can fit left foot accelerators, hoists, infrared systems, steering aids and voice operated systems. They can also install all of Autoadapt's products as they are a platinum dealer for the manufacturer. In addition to all of this, demonstrations of the new Carony Go will be given on their stand at the show. Contact: PB Conversions www.pbconversions.co.uk 01325 850588

#### CG-Lock

##### Stand: C3

A breakthrough product called the CG-Lock has just been developed that greatly increases your stability and control whilst sat in your car seat. The CG-Lock can secure your center of gravity giving you more confidence, comfort and control. This amazing little device fits on your existing seatbelt in five minutes with no drilling and is fully removable in seconds. The CG-Lock allows you to secure yourself across the hips, tightly restraining only the pelvis while allowing full upper body mobility. Andrew Ellis, Fleet Supervisor and Driving Assessor at the Queen Elizabeth Foundation Mobility

#### Aspect Conversions

Stand: C3  
Looking forward to exhibiting at the new venue, Aspect Conversions will be displaying their current range of wheelchair accessible vehicles, including another new model added just this January. Aspect have a vehicle to suit everybody from their low floor Kangaroo conversion to the best selling M-Road Doblo and revolutionary Kangaroo van that presents a fully independent solution. As ever, the company's representatives will be on hand to offer friendly, no obligation advice. Aspect have a reputation for being completely honest with customers. If one of their vehicles isn't to your liking, they don't think it is right for you, they will say so! In most cases, they can help point you towards another company that will be able to offer a better solution for your requirements. There will be the chance to test out all of Aspect Conversions' vehicles at the Roadshow, and home demonstrations can also be arranged at the event, or any other time for that matter. ### CG-Lock

#### Stand: C3

A breakthrough product called the CG-Lock has just been developed that greatly increases your stability and control whilst sat in your car seat.

The CG-Lock can secure your center of gravity giving you more confidence, comfort and control. This amazing little device fits on your existing seatbelt in five minutes with no drilling and is fully removable in seconds. The CG-Lock allows you to secure yourself across the hips, tightly restraining only the pelvis while allowing full upper body mobility.

Andrew Ellis, Fleet Supervisor and Driving Assessor at the Queen Elizabeth's Foundation Mobility

Centre, complimented the invention: "Stability leads to control and from control comes confident, safer driving...for people with a normal spine structure and full contact with the seat back the CG-Lock really works"

Customer comments have been positive too, with one user remarking: "The CG-Lock gave me much more confidence when cornering as it held me firmly in the seat. No more sliding on bends. It was very comfortable and easy to use"

Try the CG-Lock at your nearest mobility center to see if it can benefit you [www.mobility-centres.org.uk](http://www.mobility-centres.org.uk)
