Personal transport system

Designed to appeal to the law enforcement and security markets, the ZAPPY PRO has a powerful drive system, larger wheels and greater capacity than past ZAP scooter models. Traveling at speeds up to 13 mph, the ZAPPY PRO features three-wheeled stability, ease of operation and maneuverability. This electric scooter will travel up to 24 miles after four to six hours of charging.

TruckVault Inc. expands its product line with the addition of TrackVault for Dodge Magnum and Toyota FJ Cruisers.

TruckVault has utilized a unique mounting system for the Dodge Magnum public safety model which utilizes existing vehicle features to suspend a mid-sized command center above the lower cargo area, providing a weapons drawer and a fold-up map board without restricting access to the storage compartment below. TruckVault has also designed a number of products for the FJ Cruiser for both civilian and law enforcement uses.

Seat belt lock

The CG-Lock clamps to the tongue of the driver's existing three-point, factory-installed seat belt, giving it the effectiveness of a four-point harness. By providing officers with 80 percent of the holding power of a full racing harness, the CG-Lock prevents them from sliding in their seats. This device lets officers keep their feet and hands light on the pedals and wheel resulting in better control, faster reactions and less fatigue. With the CG-Lock just gently engaged (slack removed from the lap belt, but not tight), the hips are gently held back against the seat, resulting in better lumbar support. Officers can sit all day in much greater comfort with less leg and back strain. If the officer needs to transition to high-speed or off-road driving, he simply pulls the shoulder harness to tighten the lap belt, and the CG-Lock puts the officer into "harness mode" for better, safer driving.
